## Air Oil Coolers

LHC with Hydraulic Motor for Mobile and Industrial Use

ENGINEERING YOUR SUCCESS.

The Olaer Group is part of Parker Hannifin since July 1st, 2012. With manufacturing and sales in 14 countries in North America, Asia and Europe, the Olaer Group expands Parker's presence in geographic growth areas and offers expertise in hydraulic accumulator and cooling systems for target growth markets such as oil and gas, power generation and renewable energy.

## LHC Air Oil Coolers

For mobile and industrial use - maximum cooling capacity 300 kW

The LHC air oil cooler with hydraulic motor is optimized for use in the mobile and industrial sector. Together with a wide range of accessories, the LHC cooler is suitable for installation in most applications and environments. The maximum cooling capacity is 300 kW at ETD 40 °C. Choosing the right cooler requires precise sizing. The most reliable way to size is with the aid of our calculation program. This program, together with precise evaluations from our experienced, skilled engineers, gives you the opportunity for more cooling per € invested.

### Overheating - an expensive problem

An under-sized cooling capacity produces a temperature

balance that is too high. The consequences are poor lubricating properties, internal leakage, a higher risk of cavitation, damaged components, etc. Overheating leads to a significant drop in cost-efficiency and environmental consideration.

### Temperature optimisation - a basic prerequisite for cost-efficient operation

Temperature balance in a hydraulic system occurs when the cooler can cool down the energy input that the system does not consume - the system's lost energy:

( $P_{loss} = P_{cool} = P_{in} - P_{used}$ ).

Temperature optimisation means that temperature balance occurs at the system's ideal working temperature - the temperature at which the oil's

viscosity and the air content comply with recommended values.

**The correct working temperature produces a number of economic and environmental benefits:**

- The hydraulic system's useful life is extended.
- The oil's useful life is extended.
- The hydraulic system's availability increases – more operating time and fewer shutdowns.
- Service and repair costs are reduced.
- High efficiency level maintained in continuous operation – the system's efficiency falls if the temperature exceeds the ideal working temperature.

Clever design and the right choice of materials and components produce a long useful life, high availability and low service and maintenance costs.

Compact design and low weight.

Easy to maintain and easy to retrofit in many applications.

Cooler matrix with low pressure drop and high cooling capacity.

Hydraulic motor with displacement from 8.4 cm<sup>3</sup>/r to 25.2 cm<sup>3</sup>/r.

Collar bearing for fan motor on larger models provides longer useful life.

Quiet fan and fan motor.

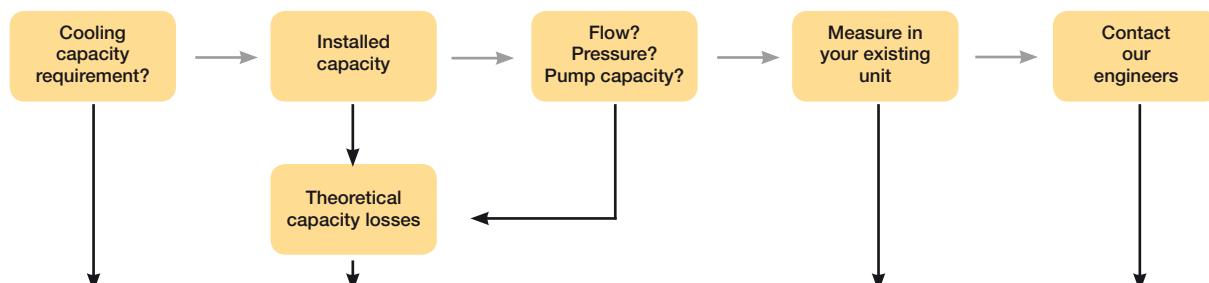

## LHC-M and LHC-X

LHC air oil coolers are also available in two special versions, LHC-X (ATEX version), approved

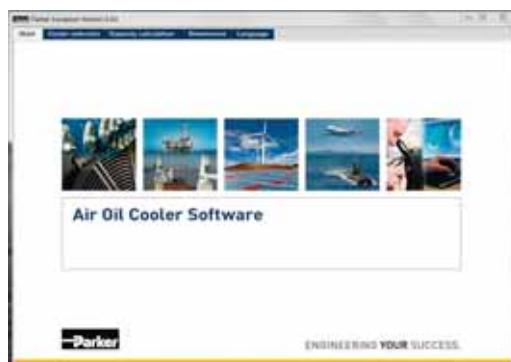

for applications where there may be an explosive environment above ground, and LHC-M,

adapted to be able better to deal with corrosion attacks, for example in marine environments.

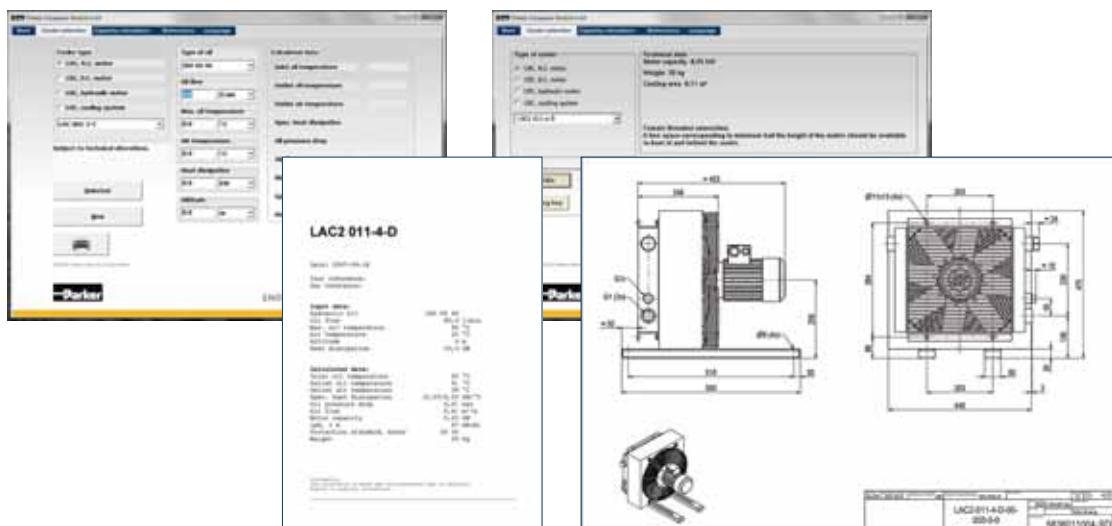

# Calculate the Cooling Capacity Requirement

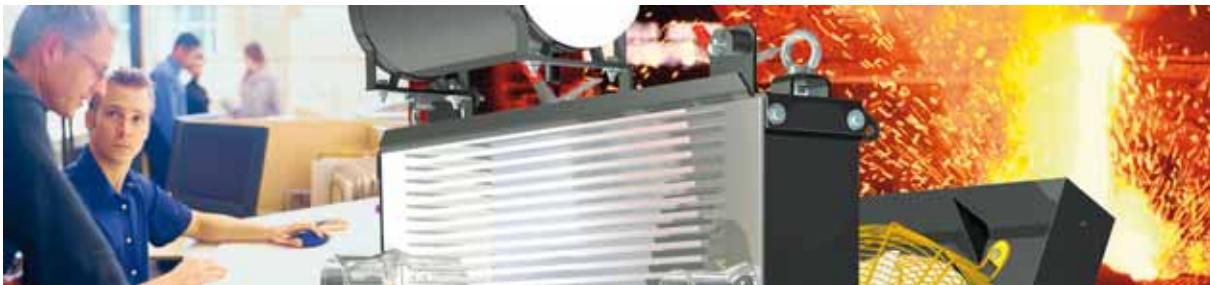

Choose the right kind of cooler

Enter your values ....

... suggested solution

Better energy consumption means not only less environmental impact, but also reduces operating costs, i.e. more cooling per € invested.

## More Cooling per €

with precise calculations and our engineers' support

Optimal sizing produces efficient cooling. Correct sizing requires knowledge and experience. Our calculation program, combined with our engineers' support, gives you access to this very knowledge and experience. The result is more cooling per € invested. The user-friendly calculation program can be downloaded from [www.olaer.se](http://www.olaer.se)

### Valuable system review into the bargain

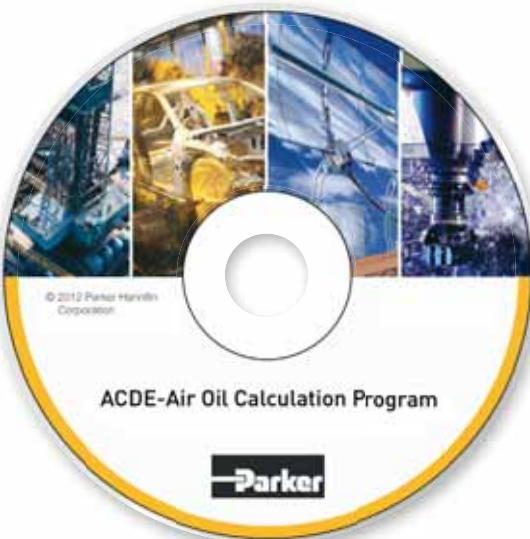

A more wide-ranging review of

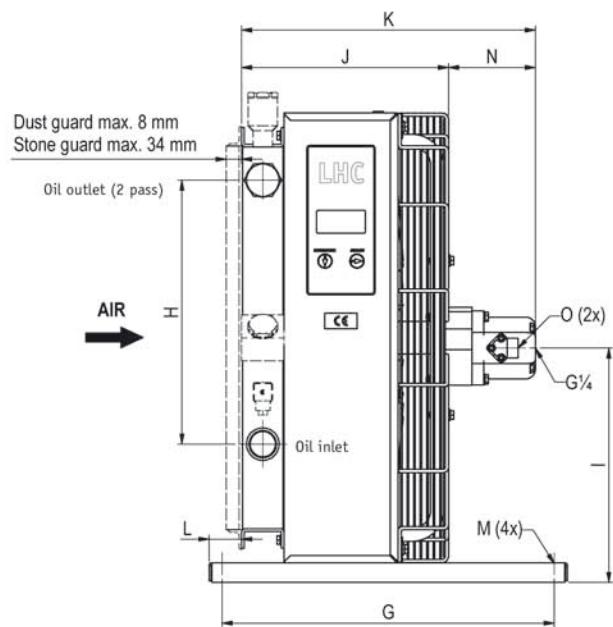

the hydraulic system is often a natural element of cooling calculations. Other potential system improvements can then be discussed - e.g. filtering, offline or online cooling, etc. Contact us for further guidance and information.

### Parker Hannifin's quality and performance guarantee insurance for your operations and systems

A constant striving towards more cost-efficient and environment friendly hydraulic systems

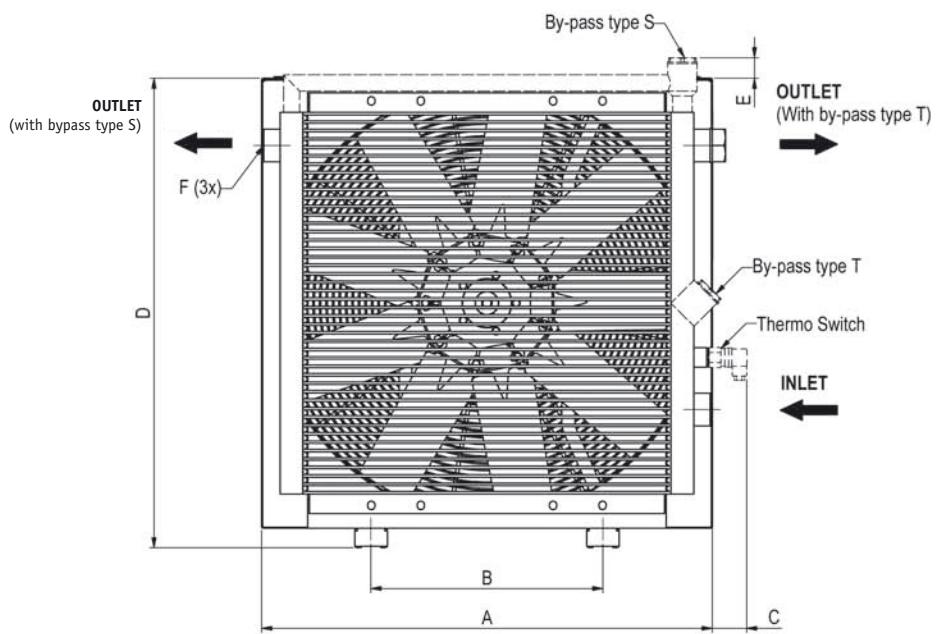

requires continuous development. Areas where we are continuously seeking to improve performance include cooling capacity, noise level, pressure drop and fatigue. Meticulous quality and performance tests are conducted in our laboratory. All tests and measurements take place in accordance with standardised methods - cooling capacity in accordance with EN1048, noise level ISO 3743, pressure drop EN 1048 and fatigue ISO 10771-1.

TYPE	Fan speed rpm	Fan capacity kW	Weight kg (approx)	Max fan speed rpm @ 40 °C	Acoustic pressure level LpA dB(A) 1m*

### TECHNICAL SPECIFICATION

#### FLUID COMBINATIONS

Mineral oil	HL/HLP in accordance with DIN 51524
Oil/water emulsion	HFA, HFB in accordance with CETOP RP 77H
Water glycol	HFC in accordance with CETOP RP 77H
Phosphate ester	HFD-R in accordance with CETOP RP 77H

#### MATERIAL

Cooler matrix	Aluminum
Fan blades/hub	Glass fibre reinforced polypropylene/ Aluminum
Fan housing	Steel
Fan guard	Steel
Other parts	Steel
Surface treatment	Electrostatically powder-coated

### COOLER MATRIX

Maximum static operating pressure	21 bar
Dynamic operating pressure	14 bar*
Heat transfer limit	± 6 %
Maximum oil inlet temperature	120 °C

\* Tested in accordance with ISO/DIS 10771-1

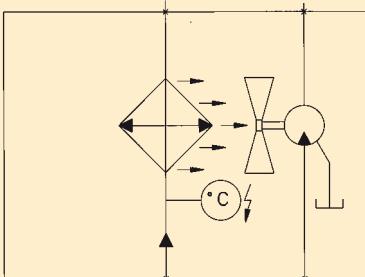

### COOLING CAPACITY CURVES

The cooling capacity curves in this technical data sheet are based on tests in accordance with EN 1048 and have been produced using oil type ISO VG 46 at 60 °C.

### CONTACT PARKER HANNIFIN FOR ADVICE ON

- Oil temperatures > 120 °C
- Oil viscosity > 100 cSt
- Aggressive environments
- Ambient air rich in particles
- High-altitude locations

### CONNECTION CHART

Connection chart for LHC air oil cooler.

The information in this brochure is subject to change without prior notice.

With our specialist expertise, industry knowledge and advanced technology, we can offer a range of different solutions for coolers and accessories to meet your requirements.

## Take the Next Step

### - choose the right accessories

Supplementing a hydraulic system with a cooler, cooler accessories and an accumulator gives you increased availability and a longer useful life, as well

as lower service and repair costs. All applications and operating environments are unique. A well-planned choice of the following accessories can thus further

improve your hydraulic system. Please contact Parker Hannifin for guidance and information.

#### Pressure-controlled bypass valve **Integrated**

Allows the oil to bypass the cooler matrix if the pressure drop is too high. Reduces the risk of the cooler bursting, e.g. in connection with cold starts and temporary peaks in pressure or flow. Available for single-pass or two-pass matrix design.

#### Thermo contact

Sensor with fixed set point, for temperature warnings. Can be used for more cost-efficient operation and better environmental consideration through the automatic control of the fan motor, either on or off.

#### Temperature-controlled bypass valve **Integrated**

Allows the oil to bypass the cooler matrix if the pressure drop is higher than 2,2 bar or less than the chosen temperature. The bypass closes when the oil temperature increases. Different closing temperatures available. Available for singlepass or two-pass matrix design

#### Lifting eyes

For simple installation and relocation.

#### Temperature-controlled

#### 3-way valve **External**

Same function as the temperature-controlled bypass valve, but positioned externally.

*Note: must be ordered separately.*

#### Stone guard/Dust guard

Protects components and systems from tough conditions.
